

TreasuryIQ – Dashboard 4: Liquidity Forecasting & Stress Testing

Dashboard Objective

This dashboard provides predictive treasury intelligence by forecasting future liquidity positions, evaluating stress scenarios, assessing liquidity breach probability, and supporting risk-based decision making. It helps treasury teams understand future liquidity conditions and prepare for adverse financial events.

Brief Summary for Team Lead

Dashboard 4 focuses on future liquidity forecasting and stress testing. It predicts liquidity for 30, 60, and 90 days using forecasting models such as Linear Regression, XGBoost, or Prophet. The dashboard also measures the probability of liquidity breaches, evaluates worst-case scenarios, and compares normal versus stressed financial conditions.

Key business value includes: Early identification of liquidity risks Scenario-based treasury planning Stress impact analysis Risk probability monitoring Improved strategic funding decisions

Key KPIs

KPI	Purpose
Forecasted Net Liquidity (30/60/90 Days)	Predict future liquidity positions
Liquidity Breach Probability	Measures risk of liquidity falling below zero
Worst Case Liquidity	Identifies maximum downside risk
Expected Liquidity	Average projected liquidity level
Stress Impact %	Shows impact of stress scenarios on liquidity

Core Visuals Included

- Liquidity Forecast Trend
- Actual vs Predicted Liquidity
- Scenario Comparison Analysis
- Monte Carlo Simulation Distribution
- Breach Probability Gauge
- Feature Importance Analysis
- Worst Case vs Expected Case Comparison

Filters & Interactivity

The dashboard includes interactive slicers and controls such as: Date Range Scenario Type Model Type Customer Segment Funding Source Stress Level Time Horizon Users can dynamically switch between normal and stress scenarios and compare model outputs.

Business Interpretation

- Negative forecasted liquidity indicates a future liquidity crisis requiring immediate action.

- High breach probability signals elevated treasury risk.
- High stress impact reflects poor resilience to market shocks.
- A large gap between expected and worst-case liquidity indicates uncertainty and extreme event exposure.

Final Outcome

This dashboard delivers predictive insights, liquidity risk assessment, and scenario-based decision support to help treasury teams proactively manage future financial risks and improve resilience.
